

Respiratory Protection

Airvisor MV Chemical Kit

Product description

Supplied Air Respirators are the proven safety solution when you need clean, compressed air from a source outside the contaminated area.

Air passes through an airline to the face piece or hood, with the continuous flow creating increased pressure inside. This pressure cools the users face and reduces fogging, a common problem in many working situations.

The Airvisor Chemical MV Paint Kit is an SAR with acetate visor which provides protection against chemical splashes.

FEATURES

- Disposable face skirt cassette.
- Foam or flame retardant skirt material available.
- Waist belt with tamper-proof airflow regulator.
- Clear acetate visor.

APPLICATIONS

- Environments containing particulates, gases & vapours up to 100 times the relevant exposure limit.

Standards

- Certified to AS/NZS 1716:2012 Licence No:1481

Technical Details

Air is compressed outside of the hazard area (1) and is channelled to a coalescing Filter (2) to be cleaned. From the filter (2), the air passes to the respirator waistbelt (3), where it is regulated to a constant flow. Air then reaches the visor (4) to provide the operator with breathable quality air. It also supplies air to the air tool (5).

Note: The compressor & air tool are not provided.
