CARE INSTRUCTIONS

Remove any visual contaminants (if the glove is heavily soiled, a pre-wash rinse is best practice).

Wash method: Machine wash is suitable, however please ensure water temp is 60°C or below

Use only mild commercial detergents: No bleaches or harsh chemicals to be used, as this will compromise the longevity of the glove.

Drying: Air drying is preferable (but not always possible). If gloves are machine dried, please ensure temperature does not exceed 60°C. Similar to the use of bleaches/harsh chemicals, this will compromise the longevity of the glove. If air drying, please ensure gloves are away from any heat or ignition sources.
